Personal Statement

I am a second-year Games Computing student with a strong passion for game development and software engineering. I am currently seeking a junior programming or internship opportunity where I can apply and expand my C++ development skills in a professional environment.

Through my studies, I have built a solid foundation in C++, object-oriented programming, and 3D graphics, alongside experience with Unreal Engine, and collaborative version control. I enjoy solving complex problems and writing efficient, maintainable code to make creative gameplay experiences.

Technical Skills

Languages: C++, Python, JavaScript,

Software Experience: Visual Studio 2022, Unreal Engine 5.6, Git

Gameplay Programming: Implementation of a gameplay system in both C++ and Unreal Engine, including player controls, and object interaction and collision.

Graphics Programming: Implementation of 3D models, textures, materials and shaders using a proprietary shader language to create a 3D environment as part of my 3D graphics programming module

Other: OOP, UE5 blueprints, HTML, React, HTML, CSS, Graphics pipelines, Shaders, Mathematics, Problem solving

Current Education

Bachelor's Degree - Games Computing
Northumbria University – Newcastle, UK
Start Date – September 2023
Projected End Date – June 2026
Key Modules – Games Programming 1,2 & 3, Game Design, Computing Consultancy Project, Computational Thinking, Computing Fundamentals, 3D Graphics Programming.

Projects

Cosmos Conqueror (PC) *2025*
Languages: C++
Description: A 2D side-scroller where you control a spaceship and shoot enemies while avoiding dynamic obstacles to achieve a high score or reach a destination point. Created as part of my games programming 2 module at university, the project achieved 71%.

Lights Out (PC) *2025*
Tools used: Unreal Engine, blueprints
Description: A first-person horror game made in Unreal Engine 5.6 where you must restore power in an abandoned facility by collecting four hidden parts to repair the broken generator while avoiding an enemy that only moves in the dark. Created as part of a collaborative project for university to showcase engaging game design. My role as a programmer meant that I had heavy involvements on features and mechanics such as object collection, torch functionality and HUD.

Miscellaneous
Favourite Games: Destiny, OSRS, Fortnite, Fifa 23, Ark Survival Evolved, Rainbow Six Siege, Hypixel Skyblock.
